1998

In 1998 I obtained a diploma in Music, specializing in Saxophone at the Josè White Conservatory of Camagüey (Cuba).

1999

In 1999 my studies continued at the Higher Institute of Art (ISA) in Havana Cuba, always specializing in Saxophone. This allowed me to acquire more knowledge in classical music and interpretation, by delving into the most influential composers in history for this instrument.

2001

This year I traveled to Europe, specifically Trento (Italy), where I was part of a jazz course taught by Francesco Bearzatti at the CDM school in Rovereto. For three years I continued saxophone and jazz lessons with maestro Robert Bonisol. While learning Jazz, I had the pleasure of sharing the stage with several musicians of this genre, I also had the experience of playing alongside great creators of the Latin genre.
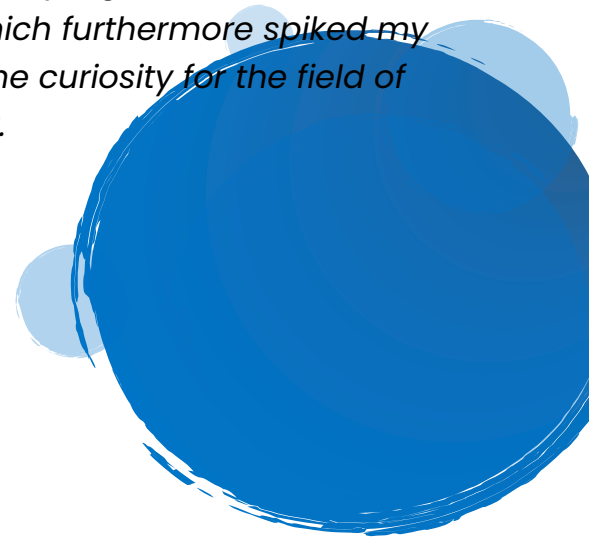

2003

In 2003 I began my professional journey with the "Luciano Pisoni" Music Center, initially building and testing the quality of reeds for the Daniel's brand today known as Pisoni Reeds. Till this day (2023) I oversee quality control for materials and the assembly of pads for clarinets and flutes.
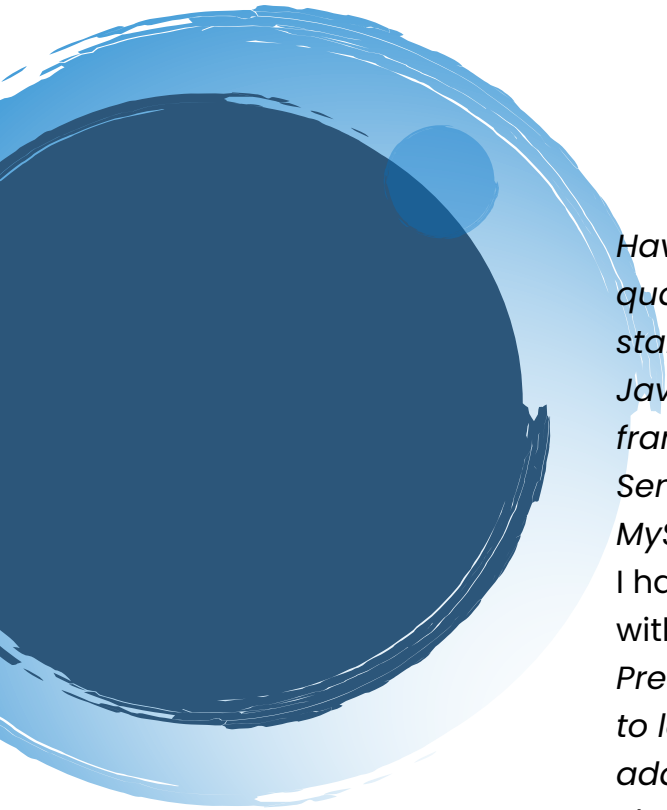

2008-2011

During this period, I started teaching Saxophone at the Guido Gallo di Mezzolombardo musical school, transmitting all my love and passion for the instrument to my students. I also had the opportunity to collaborate with the Trento's concert band as an assistant to maestro Michele Cont, to work in detail with the Clarinetists and Saxophonists, perfecting ensemble music.

2020-2023

Since I was little, in addition to music, I had a brief encounter with the world of information technology and it was something that fascinated me, but since learning the saxophone and music in general required so much effort, I could not continue. Over the years I used programs like ProTools and Logic X Pro alongside other music programs like Sibelius for writing digital music, which furthermore spiked my interest and rekindled the curiosity for the field of Information Technology.

Having a little more time in the middle of the quarantine (Dec 2020), I enriched this passion and started some online courses on HTML , CSS , JavaScript , React , frameworks JS like Next.js , frameworks CSS like Tailwinds , Material-UI , Semantic UI React and Bootstrap, PHP , NodeJS , MySQL , MongoDB , AWS and WordPress
I have collaborated for the last 2 years up to today with ILO11.
Pretty much anything and everything that is possible to learn about Web development. Until this day, in addition to my usual work, I continue to learn and sharpen my skills in this field .
